

High Definition Network Video Recorder Server

Description

The Avigilon High Definition Network Video Recorder (NVR) server was designed to achieve the highest performance for high definition video recording and playback. It integrates into any Avigilon high definition surveillance system and scales from sites with a single NVR to large multi-building campuses with multiple NVRs.

The NVR has Avigilon Control Center High Definition Network Video Management Server software preloaded and configured for maximum performance and reliability. The NVR can record up to 32 MB/s of image data from up to 96 camera channels running at 30 image per second. Viewing of live or recorded image data and administering the NVR can be done remotely using Avigilon Control Center Client software.

The NVR has enterprise class reliability with a RAID 5 hard drive configuration and the option for redundant power supplies. In addition, both the hard drives and the power supplies are hot-swappable for online repairs. The NVR has up to a 10 TB effective recording capacity that is expandable using a HD-NVR-EXP storage expansion unit. All of this comes in a space saving 2U rack mount chassis.
